

The diagram illustrates the evolution of a protein structure over time, showing three parallel trajectories of structural changes. The trajectories are represented by colored bars (red, blue, green) indicating different structural states or mutations. The diagram is divided into three main sections: 'Initial', 'Intermediate', and 'Final'. The 'Initial' section shows a red bar. The 'Intermediate' section shows a sequence of colored bars (red, blue, green) connected by arrows. The 'Final' section shows a red bar. The label 'Coding' is on the right.
