

The diagram illustrates a linear genome with two main sections: Coding and Non-coding. The Coding section is represented by a sequence of 10 vertical bars, each divided into three colored segments (blue, red, and blue). The Non-coding section is represented by a sequence of 10 black squares. The genome is shown as a continuous line with arrows indicating the direction of flow from left to right. The Coding section is located in the upper half of the diagram, and the Non-coding section is in the lower half.

WD domain, G-beta repeat (x7)
