

Figure 1: Schematic representation of the experimental design. The figure is divided into two main sections: 'Coding' and 'NMD Sensitive'. Each section contains three rows of diagrams. The 'Coding' section shows a sequence of events: a green square, four arrows, a green square with a black bar, a black square with a blue bar, a blue square with a light blue bar, four arrows, and a green square. The 'NMD Sensitive' section shows a similar sequence but with a different timing of the green square and black bar. The diagrams use color-coding: green for coding, black for NMD-sensitive, and blue for NMD-insensitive.
